

Lighting Upgrades & Retrofits

Better lighting for better buildings.

Lighting upgrades provide a win-win situation for property owners and the environment. New components provide big energy savings, improve lighting quality, provide more control, and help your building to reduce its environmental impact by reducing your energy usage, but the benefits don't stop there!

The people using your buildings benefit greatly from improved general and task lighting, optimised colour rendering, and uniform visual acuity from their new lighting systems.

Lighting upgrades offer improved colour rendering & quality.

Have you ever noticed how the light coming from old fixtures can appear yellowish? Have you ever been in a situation where you could have used better lighting? Our lighting experts have the answers to all your lighting dilemmas. Let us be your colour guide experts as we show you how great things can look with the proper lighting source. We can show you why colour rendering is important and we'll show you how to improve the look and feel of your properties with a lighting upgrade.

Lighting upgrades equal happier places to live and work.

The lighting systems within your properties could be negatively impacting the feelings and emotions of the people who use and occupy them. The proper lighting application can improve productivity, increase happiness, reduce headaches and just make people feel better altogether, making your properties more enjoyable to live and work in.

We're on your team!

Some lighting solutions require more creativity than you'd expect. Building improvements can sometimes prove to be incredibly invasive depending on the amount or types of repairs taking place. Acorn can upgrade your lighting without disrupting the lives of the people within your buildings. Don't lose valuable revenues by using inexperienced contractors or service technicians that only operate during normal business hours. Acorn has the resources to accommodate any schedule regardless of the size of the project.

It takes a flexible schedule.

We can accommodate any schedule and still get the job done – on time and on budget. We'll work around your hours, after hours, even on weekends. We'll coordinate with your engineers, your technicians, and your staff. Plus, we guarantee all upgrades will meet all electrical codes and be properly installed by qualified electrical trades people.

It takes a disposal expert.

Disposal can become a major undertaking during lighting upgrades. Many out-dated lamps and fixtures can't just be thrown in the bin! Whenever Acorn does installations, we provide proper disposal as well. We follow recommended procedures. We use licensed and qualified recyclers, and we package everything in appropriate containers – just to ensure your lighting components are disposed of properly and responsibly.

Take the guesswork out of your next lighting upgrade or retrofit.

Acorn has provided energy efficient lighting upgrades and retrofits to thousands of square feet of office space. We know our stuff. Our teams focus on proper fixtures, better designs, and better light. We know all the inputs and the performance capabilities of lighting systems and components. We know how much light your building truly needs to provide optimum comfort and savings, while maximizing occupant satisfaction.

Get all the free help you can get!

We make it our job to know about government incentives, rebate programmes, and utility incentives that can help make your return even more attractive. As part of our solution, we can capture and deliver these savings to you.
